Scopes
- class scope
- method scope
- Block scope
- loop scope

```
public  class Scopes {
    x = 69
    public static void main(String[] args) {
        int a = 10;

        if(true){
            System.out.println(a);
            int b = 20;
        }
        System.out.println(b);
    }
}
```

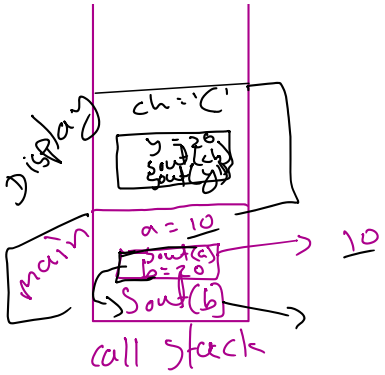

```
public  class Scopes {
    int x = 20;
    void Display(){
        char ch ='C';
        {
            int y = 20;
            System.out.println(ch);
```

```
    void display(){
        char ch ='C';
        {
            int y = 20;
            System.out.println(ch);
            System.out.println("in block y :"+y);
        }
        System.out.println(y);
    }
    public static void main(String[] args) {
        int a = 10;

        if(true){
            System.out.println(a);
            int b = 20;
        }
        System.out.println(b);
    }
}
```

error

HW

- Instance variable
- Local variable
- static variable

Type casting

widening (small to large) (automatic)

① byte → short → int → float → double

char → int

long

CE

```
byte x = 10
int y = (x)
```

narrowing (manually) (large to small)

```
int a = 120
byte b = (byte) a
```

```
float PI = 3.14
int p = (int) PI;
sout(p)
```
